

ACADEMIC QUALIFICATIONS

The University of Hong Kong, Hong Kong	Ph.D. in Physics	2023
Sun Yat-sen University, Mainland China	M.Sc. in Physics	2019
Guangdong University of Technology, Mainland China	B.Sc. in Physics	2016

ACADEMIC APPOINTMENTS

Postdoctoral Fellow	The University of Hong Kong Oct 2023 - Present
---------------------	---

RESEARCH INTERESTS

My research focuses on dynamical spectra in quantum magnetism, combining large-scale quantum Monte Carlo simulations, stochastic analytic continuation, and quasiparticle approaches (including linear spin-wave and Schwinger-boson theories) to uncover collective excitations and phase transition signatures in magnetic and topological quantum materials. Representative contributions include the identification of the amplitude (Higgs) mode through dimensional crossover [[Phys. Rev. Lett. 126, 227201 \(2021\)](#)], extraction of entanglement information from dynamical spectra [[Nat. Commun. 17, 7975 \(2026\)](#)], and collaboration with experimental teams to interpret spectroscopic observations in candidate quantum spin liquids [[Nat. Phys. 20, 1097–1102 \(2024\)](#)].

RESEACH GRANTS

Dirac spin liquid, Landau level, correlated flat-bands and their GPU accelerated Monte Carlo simulations
Co-I, GRF 17302026

RECENT TALKS

Quantum Fisher Information as a Thermal and Dynamical Probe in Frustrated spin system
[automate2026](#), Cergy-Pontoise, France 2026.05.12

TEACHING & CONFERENCE ACTIVITIES

Teaching Assistant, Physics problem-solving tutorials 2020 - 2023
Organization Assistant, [Fractional Chern insulators](#) 2025.10.04 - 07

RESEARCH PLAN

Looking ahead, my research plans are as follows:

1. **Extracting entanglement information from dynamical spectra (Quantum Fisher Information)**
 - Building on my recent QFI-from-QMC work on frustrated spins, I will use QFI to probe entanglement structure and critical scaling in quantum spin liquids and deconfined quantum critical points.
2. **Investigating the phase diagram and dynamical properties in $YCu_3(OD)_6Br_2[Br_x(OD)_{(1-x)}]$**
 - In collaboration with experimental teams, I showed that spin spectral functions in the kagome antiferromagnet $YCu_3(OD)_6Br_2[Br_x(OD)_{(1-x)}]$ violate quasi-classical predictions, suggesting a Dirac quantum spin liquid. I now plan to map its phase diagram using Schwinger boson mean-field theory and neural-network quantum states, as in [arXiv:2603.19951 \(2026\)](#), to identify candidate quantum spin-liquid phases and their dynamical signatures.
