**PUBLICATIONS**

- Spin excitations arising from anisotropic Dirac spinons in  $\text{YCu}_3(\text{OD})_6\text{Br}_2[\text{Br}_{0.33}(\text{OD})_{0.67}]$**   
Lankun Han, Zhenyuan Zeng, Min Long, Menghan Song, **Chengkang Zhou**, Bo Liu, Maiko Kofu, Kenji Nakajima, Paul Steffens, Arno Hiess, Zi Yang Meng, Yixi Su, Shiliang Li<sup>#</sup>  
[Phys. Rev. B 112, 045114 \(2025\)](#)
- Universal collective Larmor-Silin mode emerging in magnetized correlated Dirac fermions**  
Chuang Chen, Yuan Da Liao, **Chengkang Zhou**, Gaopei Pan, Zi Yang Meng, Yang Qi<sup>#</sup>  
[Phys. Rev. B 110, L121112 \(2024\)](#)
- Dimensionality crossover to a two-dimensional vestigial nematic state from a three-dimensional antiferromagnet in a honeycomb van der Waals magnet**  
Zeliang Sun\*, Gaihua Ye\*, **Chengkang Zhou\***, Mengqi Huang, Nan Huang, Xilong Xu, Qiuyang Li, Guoxin Zheng, Zhipeng Ye, Cynthia Nnokwe, Lu Li, Hui Deng, Li Yang, David Mandrus, Zi Yang Meng, Kai Sun, Chunhui Rita Du, Rui He<sup>#</sup>, Liuyan Zhao<sup>#</sup>  
[Nat. Phys. 20, 1764–1771 \(2024\)](#)  
(Journal Impact Factor: 19.3, *Corresponding News*)
- Spectral evidence for Dirac spinons in a kagome lattice antiferromagnet**  
Zhenyuan Zeng\*, **Chengkang Zhou\***, Honglin Zhou\*, Lankun Han, Runze Chi, Kuo Li, Maiko Kofu, Kenji Nakajima<sup>#</sup>, Yuan Wei, Wenliang Zhang, D. G. Mazzone, Zi Yang Meng<sup>#</sup>, Shiliang Li<sup>#</sup>  
[Nat. Phys. 20, 1097–1102 \(2024\)](#)  
(Journal Impact Factor: 19.3, *Corresponding News*)
- Dynamical properties of quantum many-body systems with long range interactions**  
Menghan Song, Jiarui Zhao, **Chengkang Zhou**, Zi Yang Meng<sup>#</sup>  
[Phys. Rev. Research 5, 033046 \(2023\)](#)
- Evolution of Dynamical Signature in the X-cube Fracton Topological Order**  
**Chengkang Zhou\***, Meng-Yuan Li\*, Zheng Yan<sup>#</sup>, Peng Ye<sup>#</sup>, Zi Yang Meng  
[Phys. Rev. Research 4, 033111 \(2022\)](#)
- Detecting Subsystem Symmetry Protected Topological Order Through Strange Correlators**  
**Chengkang Zhou\***, Meng-Yuan Li\*, Zheng Yan, Peng Ye<sup>#</sup>, Zi Yang Meng<sup>#</sup>  
[Phys. Rev. B 106, 214428 \(2022\)](#)
- Amplitude Mode in Quantum Magnets via Dimensional Crossover**  
**Chengkang Zhou**, Zheng Yan, Han-Qing Wu, Kai Sun, Oleg A. Starykh, Zi Yang Meng<sup>#</sup>  
[Phys. Rev. Lett. 126, 227201 \(2021\)](#)
- XXZ-Ising model on the triangular kagome lattice with spin 1 on the decorated trimers,**  
**Chengkang Zhou**, Yuanwei Feng, Jiawei Ruan, and Dao-Xin Yao<sup>#</sup>  
[Phys. Rev. E 98, 012127 \(2018\)](#)

1. **Quantum Fisher Information as a Probe of Critical Scaling in Frustrated Magnets: Signatures from Kagome Quantum Spin Liquid**  
Zhengbang Zhou\*, Chengkang Zhou\*, Menghan Song, Yong Baek Kim<sup>#</sup>, Zi Yang Meng<sup>#</sup>  
[arXiv:2603.19951 \(2026\)](#)
2. **Quantum Fisher Information as a Thermal and Dynamical Probe in Frustrated Magnets: Insights from Quantum Spin Ice**  
Chengkang Zhou\*, Zhengbang Zhou\*, Félix Desrochers, Yong Baek Kim<sup>#</sup>, Zi Yang Meng<sup>#</sup>  
[arXiv:2510.14813 \(2025\)](#)  
Nat. Commun. (accepted)
3. **Spectroscopic evidences for the spontaneous symmetry breaking at the  $SO(5)$  deconfined critical point of  $J-Q_3$  model**  
Shutao Liu\*, Yan Liu\*, Chengkang Zhou\*, Zhe Wang, Jie Lou, Changle Liu<sup>#</sup>, Zheng Yan<sup>#</sup>, Yan Chen<sup>#</sup>  
[arXiv:2512.11329 \(2025\)](#)

## RECENT TALKS

Quantum Fisher Information as a Thermal and Dynamical Probe in Frustrated spin system  
[automate2026](#), Cergy-Pontoise, France 2026.05.12

## TEACHING & CONFERENCE ACTIVITIES

extbfTeaching Assistant, Physics problem-solving tutorials 2020–2023

## RESEARCH INTERESTS

My research focuses on dynamical spectra in quantum magnetism, combining **large-scale quantum Monte Carlo simulations**, **stochastic analytic continuation**, and quasiparticle approaches (including **linear spin-wave** and Schwinger boson theories) to uncover collective excitations and phase-transition signatures in magnetic and topological quantum materials. Representative results include identifying the amplitude (Higgs) mode through dimensional crossover [[Phys. Rev. Lett. 126, 227201 \(2021\)](#)], revealing dynamical signatures of fracton topological order [[Phys. Rev. Research 4.033111 \(2022\)](#)], and collaborating with experimental teams to interpret spectroscopic observations in candidate quantum spin liquids [[Nat. Phys. 20, 1097–1102 \(2024\)](#)].

Looking ahead, my research plans are as follows:

1. **Extracting entanglement information from dynamical spectra (Quantum Fisher Information (QFI))**
  - Recent advances at the interface of quantum many-body physics and quantum information science have introduced new concepts, including **Quantum Fisher Information (QFI)**. QFI can be accessed through spectral functions, thereby bridging quantum entanglement and dynamical experimental observables. In my recent work [[arXiv:2510.14813 \(2025\)](#) & [arXiv:2603.19951 \(2026\)](#)], I developed a framework to compute QFI from large-scale quantum Monte Carlo simulations and applied it to investigate the thermal and dynamical properties of frustrated spin systems. Our results demonstrate that QFI can effectively capture signatures of the emergence of quantum spin-liquid phases, fractionalized excitations, and phase transitions in frustrated magnets. In the next stage, building on the fundamental nature of QFI, I plan to further explore its capability to probe detailed entanglement structures and critical scaling behavior in quantum many-body systems, particularly in quantum spin liquids and at deconfined quantum critical points.
2. **Investigating the phase diagram and dynamical properties in  $YCu_3(OD)_6Br_2[Br_x(OD)_{(1-x)}]$** 
  - Through collaboration with experimental teams, I have investigated spin spectral functions in the kagome-lattice antiferromagnet  $YCu_3(OD)_6Br_2[Br_x(OD)_{(1-x)}]$ , establishing the prospect of realizing a Dirac quantum spin liquid in this material by demonstrating that the observed spectral features violate quasi-classical predictions [[Nat. Phys. 20, 1097–1102 \(2024\)](#)]. Motivated by these observations, I plan to map out its phase diagram in greater detail using Schwinger boson mean-field theory and other rapidly advancing numerical approaches, such as neural-network quantum states. The goal is to identify candidate quantum spin-liquid phases and their dynamical signatures in this kagome magnet.
